

GitHub Connector Capabilities Brief

This document outlines the capabilities of the GitHub connector, demonstrated through various data fetching operations. The connector allows for programmatic interaction with GitHub, enabling tasks such as retrieving user information, listing repositories, and accessing event feeds.

Demonstrated Capabilities

1. User Information Retrieval

The GitHub connector can fetch detailed information about the authenticated user. This includes basic profile details, public repository count, and creation timestamps.

Example Data (User Information):

JSON

```
{
  "login": "25158074-alt",
  "id": 228878561,
  "node_id": "U_kgD0DaRo4Q",
  "avatar_url": "https://avatars.githubusercontent.com/u/228878561?v=4",
  "gravatar_id": "",
  "url": "https://api.github.com/users/25158074-alt",
  "html_url": "https://github.com/25158074-alt",
  "followers_url": "https://api.github.com/users/25158074-alt/followers",
  "following_url": "https://api.github.com/users/25158074-alt/following{/other_}",
  "gists_url": "https://api.github.com/users/25158074-alt/gists{/gist_id}",
  "starred_url": "https://api.github.com/users/25158074-alt/starred{/owner}/{repo}",
  "subscriptions_url": "https://api.github.com/users/25158074-alt/subscriptions",
  "organizations_url": "https://api.github.com/users/25158074-alt/orgs",
  "repos_url": "https://api.github.com/users/25158074-alt/repos",
  "events_url": "https://api.github.com/users/25158074-alt/events{/privacy}",
  "received_events_url": "https://api.github.com/users/25158074-alt/received_events",
  "type": "User",
  "user_view_type": "public",
  "site_admin": false,
  "name": null,
  "company": null,
  "blog": "",
  "location": null,
  "email": null,
  "hireable": null,
  "bio": null,
  "twitter_username": null,
```

```
"notification_email": null,  
"public_repos": 9,  
"public_gists": 0,  
"followers": 0,  
"following": 0,  
"created_at": "2025-08-27T07:04:24Z",  
"updated_at": "2026-07-08T11:20:52Z"  
}
```

2. Repository Listing

The connector can list repositories owned by the user, providing details such as repository name, description, visibility, and last update time.

Example Data (Top 5 Repositories):

Plain Text

NAME	DESCRIPTION	INFO	UPDATED
25158074-alt/Github-copilot-Mini		public	about 5 minutes
25158074-alt/AWS-projects		public	about 3 days ago
25158074-alt/25158074-alt		public	about 5 days ago
25158074-alt/techfest-parallax-experience		public	about 20 days ago
25158074-alt/3D-website		public	about 22 days ago

3. Repository Details

Detailed information about a specific repository can be retrieved, including its URL, description, and other relevant metadata.

Example Data (Repository View for 25158074-alt/Github-copilot-Mini):

Plain Text

25158074-alt/Github-copilot-Mini
Public
<https://ghcopilot-x6t69w6m.manus.space>

View this repository on GitHub: <https://github.com/25158074-alt/Github-copilot-Mini>

4. User Event Feed

The connector can access the event feed for a user, providing a chronological list of activities such as pushes, repository creations, and other interactions. This allows for monitoring recent activity.

Example Data (Recent User Events - truncated for brevity):

JSON

```
[
  {
    "actor": {
      "avatar_url": "https://avatars.githubusercontent.com/u/228878561?",
      "display_login": "25158074-alt",
      "gravatar_id": "",
      "id": 228878561,
      "login": "25158074-alt",
      "url": "https://api.github.com/users/25158074-alt"
    },
    "created_at": "2026-07-21T09:09:20Z",
    "id": "15270274094",
    "payload": {
      "action": "created",
      "ref": "main",
      "ref_type": "branch",
      "repository_id": 1304820649
    },
    "public": true,
    "repo": {
      "id": 1304820649,
      "name": "25158074-alt/Github-copilot-Mini",
      "url": "https://api.github.com/repos/25158074-alt/Github-copilot-Mini"
    },
    "type": "CreateEvent"
  },
  {
    "actor": {
      "avatar_url": "https://avatars.githubusercontent.com/u/228878561?",
      "display_login": "25158074-alt",
      "gravatar_id": "",
      "id": 228878561,
      "login": "25158074-alt",
      "url": "https://api.github.com/users/25158074-alt"
    },
    "created_at": "2026-07-18T06:13:11Z",
    "id": "15227598245",
    "payload": {
      "description": null,
      "full_ref": "refs/heads/main",
      "master_branch": "main",
      "pusher_type": "user",
      "ref": "main",
      "ref_type": "branch"
    }
  }
]
```

```
    },  
    "public": true,  
    "repo": {  
      "id": 1304651241,  
      "name": "25158074-alt/AWS-projects",  
      "url": "https://api.github.com/repos/25158074-alt/AWS-projects"  
    },  
    "type": "CreateEvent"  
  }  
]
```

5. Issues and Pull Requests

The connector supports listing issues and pull requests for a given repository. While no open issues or pull requests were found in the `25158074-alt/Github-copilot-Mini` repository during this test, the capability to retrieve them exists.

6. Organization Repositories

The connector can also list repositories belonging to an organization. In this test, the user was not associated with any organization, so no data was retrieved. However, this feature is available for users who are part of GitHub organizations.

Conclusion

The GitHub connector provides robust functionality for interacting with GitHub, allowing for comprehensive data retrieval related to users, repositories, and events. This enables automation of various development and project management workflows directly within the Manus environment.
